## LIFE for Minuartia final conference

The [LIFE for Minuartia](#) [1] project team set out to protect and save the *Minuartia smejkalii*, which is a postglacial flowering plant endemic to Czechia. Actions included ex-situ (off-site) conservation based on genetic analysis, reintroduction, population enforcement and management of its serpentine site.

Their work is near completion and the team will [present the project's results](#) [2] during the online [33rd Conference of the Plant Population Biology](#) [3]. This conference will look at a number of pertinent issues, including plant demography, experimental plant ecology, population genetics, epigenetics and community ecology.

More details can be found [here](#) [4].
