

Factsheet: Artificial Intelligence for Europe

A European approach on AI will boost the European Union's competitiveness and ensure trust based on European values. The European Commission has already invested significant amounts to bring benefits to our society and economy. This factsheet provides an overview of AI in Europe.

In its Communication "Artificial intelligence for Europe", the Commission puts forward a European approach to Artificial Intelligence based on three pillars:

- Being ahead of technological developments and encouraging uptake by the public and private sectors
- Prepare for socio-economic changes brought about by AI
- Ensure an appropriate ethical and legal framework
